

# Does My Tree Have Emerald Ash Borer (EAB)?

**1**

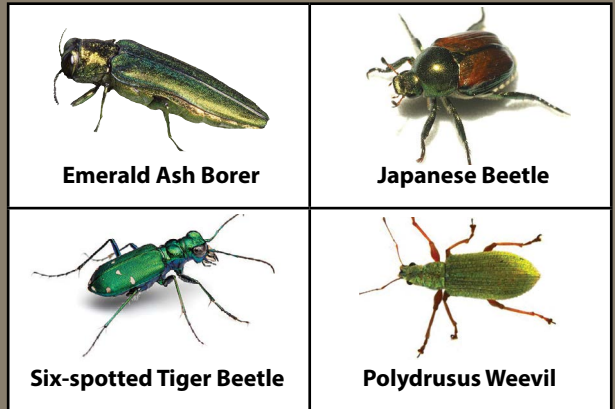

I think my ash tree may be infested with EAB.

→ If yes, GO TO **STEP #3**

**2**

I suspect I have seen an EAB.

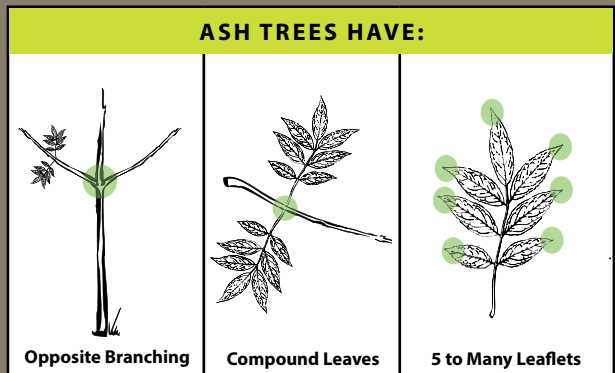

BUGS ARE NOT TO SCALE

→ If yes, GO TO **STEP #5**

**3**

Is my tree an ash?

→ If yes, GO TO **STEP #4**

→ If no, GO TO **STEP #6**

4

Does my ash tree have symptoms of EAB?

→ If yes, GO TO **STEP #5**

→ If no, GO TO **STEP #6**

**WOODPECKER HOLES**

← Woodpeckers like EAB larvae and woodpecker holes may indicate the presence of EAB.

**BARK CRACKS** →

EAB larvae tunneling beneath the bark can cause the bark to split open, revealing the larval galleries beneath.

**S-SHAPED GALLERIES**

← The distinct S-shaped galleries under the bark are diagnostic of EAB.

5

It could be EAB.

6

It isn't EAB; so, what is it?

→ Visit the University of Minnesota Extension "What's Wrong With My Plant" website to diagnose the problem. You can also visit your local forester or arborist.
